Course title: Essential Consultation Skills for FCPs

Delivered by: David Alderson

Course length: 1 day

Course Outline:

A one-day course which has relevance in all specialties of clinical practice but is focused on those in an FCP environment. Aimed at early stage/ moderately established FCP clinicians, it complements other MACP courses such as imaging and bloods.

The course will explore theoretical knowledge which underpins primary care practice, with specific focus on effective consultation. It will support clinicians to develop these skills and deliver care in a pragmatic way, emulating GP best practice.

Style of teaching: Can be delivered remotely but would be optimised in Face-to-Face delivery.

Aims: Provide an understanding of core consultation skills that are relevant in contemporary FCP practice

Learning Objectives:

- To understand the GP approach and the consultation techniques taught in their training
- To understand primary care consultation models and consider how we mould the Physio approach to best fit
- To use fine detail from the consultation (considering the unsaid whilst also utilising ideas, concerns and expectations) to demonstrate patient centred communication
- To be able to better appreciate and clinically reason in the face of complexity and cognitive bias

Format:

Highly interactive, evidence-based content, that will be delivered with a mixed approach of tutor delivery, group work and open discussion. Clinically relevant case studies will provide a context in which to apply the principles covered

Structure:

The course explores the development of skills specifically required in FCP/ primary care settings. The introduction will briefly cover the philosophy behind FCP and its role in healthcare. Learners will share thoughts on the unique challenges they face in their roles.

Due to the short and pressured nature of FCP, we will spend time on the execution of consultation, how this can shape the direction of travel in hypothesis building and how we can take inspiration from GP training to try to navigate this. Within this we will incorporate identification of overt and covert cues, managing 'Ideas, Concerns and Expectations' and use of summarising to aid clinical reasoning. This will be explored practically with the sharing of current practices, participation and peer feedback.

Due to the blurred lines in FCP, time will be spent on uncertainty in primary care and steps we can take to reduce its impact, while also considering common cognitive biases. We will also explore clinical case studies specific to primary care and the FCP role in conversations about wider health and other external factors when building a plan with our patient.

Proposed course Programme (with mid morning/ afternoon and lunch break) :

Morning – 1h25

Introduction – The wonder of primary care and the NHS, but what do patients complain about?

Developing GP special techniques and increasing understanding of common (and not so common pitfalls in primary care) – For example, 'Beware disease to please/ 3 strikes and you're in/ clinician as a drug'

Late morning - 1h25

Consultation – How does a traditional Physio and FCP consultation compare? // How much information is enough? // How GPs train these skills// Examples // Observing for cues

Propose modified consultation approach

Practical – Developing consultation skills with case studies. Applying them practically with peers – golden minutes, open questioning, responding to cues, summarising, most likely cause

Lunch break

Early afternoon - 1h25

Practical - Complete consultation structure with case studies. Applying them practically with peers – making ICE conversational// option sharing/ shared decision making of best available options

Late afternoon - 1h25

Considering barriers, Mental health and wider health – starting conversations but including risk and where MSK FCP fit

Tolerating uncertainty – navigating cognitive biases, Clinical reasoning and the role for safety netting

Close 430pm

Questions, reflections and home

Resources

Presentation including references - including signposting to further self-driven reading. Further signposting to other interesting resources

Case study booklet to complete and refer to

Participants as peer group, practice in small groups

Biography: David Alderson is currently a senior lecturer and course lead of the Advanced MSK practice MSc at Sheffield Hallam University (SHU) and lectures on MACP modules. He now splits his time between the university and working part-time for a large Primary care network in York. Prior to this, David worked full time and was fundamental in the initial group that established the FCP service. He was part of the first round of Roadmap supervisors and is now integral in the ongoing development of new FCP's as their lead MSK Specialist.

David also works as a medical tutor and tutor developer for the Football Association. This has required F2F delivery of medical courses to learners from grassroots to elite level support staff. In addition, as a tutor developer, he provides pedagogical support for 25 medical tutors in delivering and maintaining high quality educational experiences
